IDENTITY INTELLIGENCE

UNMASK THE PERSON BEHIND THE MONITOR

Bad actors and enemy nations continually leverage the cyber landscape to engage in and conceal ill-intended activities. The United States defense and intelligence communities need the most advanced tools and data to untangle the web of online deception.

SpyCloud's Identity Intelligence provides access to the most current, high-fidelity, and high-efficacy data in the deep and dark web. Coupled with our rich analytics, SpyCloud offers a streamlined tool for compiling pattern-of-life insights for finding and targeting individuals.

Our team of former federal analysts and investigators, intelligence operatives, and technology and data experts are committed to building the platforms and tools that intelligence and defense agencies need to piece together digital activities and identify key actors.

Compile Pattern-of-Life insights

Access intelligence behind national firewalls

Connect online identities and individuals

BUILD A COMPLETE PATTERN-OF-LIFE ANALYSIS

Follow an individual's or organization's digital exhaust including the dark web.

▶ Connect emails and usernames to aliases, passwords, crypto wallets, and other PII

▶ Draw connections between online identities and individuals

▶ Have breach and malware-exfiltrated data months before organizations know they've been infiltrated

▶ Access advanced open-source identity intelligence from behind national firewalls

▶ Uncover individual and organizational relationships, as well as connections to shell companies

WE ANSWER YOUR CHALLENGING QUESTIONS

As security teams investigate the behavior, activities, and potential threats of individuals and organizations, there are many questions you likely want to ask but don't have access to the right data or may not know where to look – we close that gap. With SpyCloud, you'll uncover information quickly and achieve actionable intelligence much faster through one unified lens.

|			
What groups/organizations/companies does an individual associate with?	Who owns that email, cyber wallet, or social accounts?	How can I tell if two people were in the same place during a period of time?	Does a target have alternate identities?

SPYCLOUD'S IDENTITY INTELLIGENCE: YOUR MOST ROBUST AND RELIABLE SOURCE OF RECAPTURED UNDERGROUND DATA

SpyCloud's unique platform compiles the most reliable set of open-source intelligence data from the criminal underground, supporting the full spectrum of cyber operations and offering a deeper dimension of understanding of bad actors' intentions.
Digital Exhaust

Every action online leaves a trace. Despite efforts to clean one's online footprint, there remains evidence of online activity — SpyCloud helps you follow the trail with more definitive clues. We compile browser history, usernames, passwords, social handles, locations, activities, purchase histories, hobbies, and more.

Breach Data

System breaches and attacks release billions of (PII) assets across the dark web. This information is incredibly valuable for investigations. SpyCloud's platform identifies and culls that information as it circles the criminal underground—we have it before most organizations know they've been infiltrated.
Malware Data

Cybercriminals capture billions of stolen data assets from infected Internet-connected devices, from cell phones to tablets to laptop computers, with various types of infostealer malware. This opens doors to users' data without the device owner's permission or awareness. Infostealer logs present an opportunity to view into spaces that were previously impossible.

SpyCloud has mastered the technique of recapturing and leveraging compromised breach and malware data available to help create a more complete pattern of life analysis and unveil valuable target information and insights. The platform is tailored to meet your technological access needs, including portals, APIs, and other common integrations.

SPYCLOUD: **IDENTITY INTELLIGENCE**

SPYCLOUD CLIENTS

DEPARTMENT OF EDUCATION · UNITED STATES OF AMERICA

UNITED STATES CYBER COMMAND

DEPARTMENT OF DEFENSE · UNITED STATES OF AMERICA

U.S. AIR FORCE

DEPARTMENT OF JUSTICE · FEDERAL BUREAU OF INVESTIGATION

IRS

U.S. DEPARTMENT OF ENERGY

SPYCLOUD ASSETS BY THE NUMBERS

▶ **745B+**
total assets

▶ **25B+**
new assets added every month

▶ **40,000+**
breach sources

▶ **1.6B**
identities exposed by infostealer malware

THE SPYCLOUD ADVANTAGE – TRACK TARGETS AND ASSESS THREATS

— Most comprehensive and current global identity intelligence data collection

— Data is clean and organized to simplify analysis

— Analytics easily identify connections to build a target profile

— Data delivery via portal, API, on-premise, and analyst services

— Integrates with Splunk, Palo Alto Cortex XSOAR, and other common SOARs, SIEMs, and identity providers
