

SpyCloud

CYBERCRIME DOESN'T TAKE BREAKS, AND NEITHER DO WE

SECURITY TEAMS NEED RELIABLE, DEFINITIVE DARKNET DATA – REGARDLESS OF THE DATA EXFILTRATION TECHNIQUES USED BY CRIMINALS – TO ACT BEFORE ATTACKERS DO

WHY SPYCLOUD?

The criminal underground is booming, and so is the cybercrime economy that threatens your business and customers. From account takeover and online fraud, to session hijacking and ransomware, traditional threat intelligence is no longer a sufficient defense against urgent, evolving threats. You need the power to act on the stolen data criminals are using against your employees, contractors, vendors, and customers – before they do.

SpyCloud delivers true evidence of compromise with the fastest mechanism to detect identity threats, automatically remediate exposures, and prevent follow-on attacks.

HOW WE'RE DIFFERENT

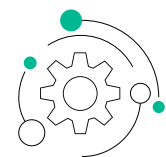

INDUSTRY'S FASTEST RECAPTURE OF DARKNET DATA

We know beating cybercriminals requires speed. SpyCloud recaptures data from breach and malware infections relentlessly, around the clock, so you have the upper hand.

ANALYTICS THAT MAKE DECISION-MAKING EASIER

We hate noise and false positives as much as you do. SpyCloud delivers alerts you want more of, saving time on discovery and manual correlation, and giving you rich context to support triage, investigation, and remediation.

FLEXIBLE INTEGRATION INTO YOUR WORKFLOWS

We're here to make your life easier, not harder. Beyond friendly interfaces, SpyCloud fits into your current workflows with integrations into common SIEMs, SOARs, and identity providers.

OUR POWERFUL CYBERCRIME ANALYTICS ENGINE

curates, enriches, and analyzes cybercrime data from darknet sources only we can access. We recapture 500+ breaches per week, alongside data from millions of malware-infected devices, to negate the value of exposed data and stop identity-based attacks.

USE CASES

It's wildly difficult to stay on top of the vast personal and authentication data stolen from employees and customers that can be leveraged in targeted attacks. We solve that problem for teams like yours, minimizing your attack surface and related risks.
